MATHEMATICS: PAPER I

MARKING GUIDELINES

Time: 3 hours

150 marks

These marking guidelines are prepared for use by examiners and sub-examiners, all of whom are required to attend a standardisation meeting to ensure that the guidelines are consistently interpreted and applied in the marking of candidates' scripts.

The IEB will not enter into any discussions or correspondence about any marking guidelines. It is acknowledged that there may be different views about some matters of emphasis or detail in the guidelines. It is also recognised that, without the benefit of attendance at a standardisation meeting, there may be different interpretations of the application of the marking guidelines.

$$x^{2} + bx + a = 0$$

$$\left(x + \sqrt{a}\right)^{2} = 0$$

$$x^{2} + 2\sqrt{a}x + a = 0$$

∴ $b = 2\sqrt{a}$... eq. 2 ✓

Substitute eq1 in eq 2:

$$\therefore a^{\frac{3}{2}} = 2^3$$
$$\therefore \left(a^{\frac{3}{2}}\right)^{\frac{2}{3}} = \left(2^3\right)^{\frac{2}{3}} \quad \checkmark$$
$$\therefore a = 4 \qquad \text{and} \quad b = 4$$

Therefore, the graph of h does intersect the graph of g at its point of inflection.

Alternate:

For point of inflection: Let $g''(x) = 0 \checkmark$ $g'(x) = 3x^2 - 6x \checkmark$ $g''(x) = 6x - 6 \checkmark$ $6x - 6 = 0 \qquad \therefore x = 1 \checkmark$ For co-ordinate of point of inflection: Substitute x = 1 in $f(1) = (1)^3 - 3(1)^2 \checkmark$

f(1) = -2

Substitute (1;-2) in
$$y = -\frac{2}{3}x - \frac{4}{3}$$

QUESTION 12

Let the number of missiles required for firing be *n*. P(all will miss) = $(1-0,9)^n$ \therefore P(all will miss) = $0,1^n \checkmark \checkmark$ P(at least 1 will hit) = $1-0,1^n \checkmark$ We require: $1-0,1^n > 0,97$ When n=1, $1-0,1^1 = 0,9$ When n=2, $1-0,1^2 = 0,99 \checkmark \checkmark$ When n=3, $1-0,1^3 = 0,999$ Therefore, at least 2 missiles should be fired. Therefore, Lulu was correct. \checkmark

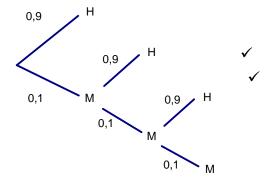

Alternate:

Let the number of missiles required for firing be *n*. P(all will miss) = $(1-0,9)^n$ \therefore P(all will miss) = $0,1^n \checkmark \checkmark$

Let: $1-0, 1^n = 0,97 \checkmark$ $0,03 = 0, 1^n \checkmark$ $\log_{0,1} 0,03 = n \checkmark$ $n \approx 1,5 \checkmark$ Therefore, at least 2 missiles need to be fired to ensure at l

Therefore, at least 2 missiles need to be fired to ensure at least a 0,97 chance of hitting the target. Lulu was correct \checkmark

Alternate:

First missile fired: P(a hit) = 0.9

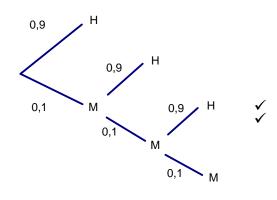

Second missile fired: P(a hit) = 0,9 + MH

$$= 0.9 + (0.1 \times 0.9)$$

Third missile fired: P(hit) = 0.9 + MH + MMH

$$= 0,9 + (0,1 \times 0,9) + (0,1 \times 0,1 \times 0,9)$$

= 0,999 Hence Lulu was correct 🗸

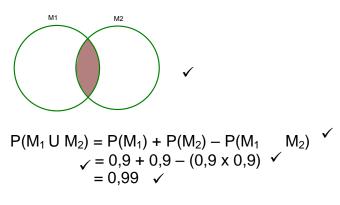

2 Missiles fired:

P(a hit) = 1 - P(no hit)= 1 - P(MM)= 1 - (0,1 x 0,1) $= 0,99 \checkmark$

3 missiles fired: P(a hit) = 1 - P(no hit)= 1 - P(MMM)= $1 - (0,1 \times 0,1 \times 0,1)$ = 0,999

Hence Lulu was correct. ✓

Alternate:

Similarly, if 3 missiles are fired: $P(M_1 \cup M_2 \cup M_3) = 0,999$

Hence Lulu was correct 🗸
